

Department of Sociology, Anthropology, and Public Health

Internship Handbook for Public Health

Public Health (PBHL) is one of three undergraduate majors in the Department of Sociology, Anthropology, and Public Health. The Public Health major is designed to prepare students for employment and graduate education in health-related disciplines. A required component of the academic program is experiential learning, of which an internship is one option.

What do graduates do with a Public Health degree?

Many Public Health majors go directly into the workforce after graduation. Graduates from the program have become successfully employed in non-clinical medical settings in hospitals and other healthcare facilities, local, state, and federal government agencies, and non-profit organizations. Frequently these positions are the result of the Public Health internship.

Public Health graduates are also well prepared for entrance into graduate school in public health and other health-related fields. For students who anticipate applying to graduate school, the internship provides valuable professional contacts and insights into professional career pathways.

Curriculum Overview

The core courses are designed to provide students with the foundational training needed to pursue careers or graduate school in public health. The core courses are (for students starting fall 2024):

| |
|--|
| Core Curriculum: 49 credits |
| PBHL 100: Introduction to Public Health |
| BIOL 101: Concepts in Biology OR BIOL 141: Foundations of Biology: Cells and Evolution |
| PBHL 200: Human Health and Disease |
| PBHL 202: Environmental Health |
| PBHL 280: Global Health |
| PBHL 300: Research Methods in Health |
| PBHL 316: Introduction to Health Policy |
| PBHL 340: Health Communication |
| PBHL 354: Social Bases of Community and Public Health |
| PBHL 445: Planning and Evaluation for Public Health Programs |
| Six Credits of Experiential Learning (internship, research practicum, capstone) |
| Nine Credits of Public Health Electives |

See the SAPH Department website for more information about previous versions of the Public Health Curriculum.
<https://saph.umbc.edu/academic-program-requirements-happ/>

Departmental Policies for Public Health Majors

Summary of Student Responsibilities

- Public Health majors must maintain an overall cumulative GPA of 2.5 to remain in the major. Students must have attained/maintained that GPA by the semester they declare their intent to enroll in the internship.
- Students who have not earned the 2.5 overall GPA will need to delay their internship until they have achieved the required GPA. They may then declare intent for the next available internship session. For example, students who attain a 2.5 GPA upon receiving Fall semester grades will need to declare intent during the Spring semester and may seek an internship during the Summer session (if offered) or the next Fall.
- Students must have earned a minimum of 90 credits towards their degree before enrolling in the internship course.
- Students must successfully complete PBHL 300: Research Methods in Health (with a C or better) before enrolling in the internship course.
- Transportation to and from the internship site (including sites that may be part of internship responsibilities) is solely the responsibility of the student enrolled in the internship. Students must be aware that reliance on public and/or campus transportation will severely restrict internship opportunities.
- Students must register for PBHL 470 or PBHL 471 (six-credit full-time or three-credit part-time Public Health Internship) during the semester they complete their internship hours. Students are not permitted to register for PBHL internship credits during a different semester. PBHL 470 and PBHL 471 are options that count toward the required six-credit experiential learning component of the Public Health BA.
- Students must register for and successfully complete PRAC 098 as a corequisite to PBHL 470 and PBHL 471. PRAC 098 is housed in the UMBC Career Center and includes professional development activities the student completes during the internship semester. PRAC 098 is a no-credit, no-cost course for the student intern.
- If a student completes one section of PBHL 471 they can complete an additional section of PBHL 471 during another semester to complete the six-credit Experiential Learning component of the Public Health BA. Students can also complete other courses (research practicum, capstone) in conjunction with PBHL 471 to complete the Experiential Learning component of the Public Health BA.

Internship Overview

Enrollment is by permission only. Identifying an internship site and developing an internship agreement require time and planning. Students are encouraged to start researching internship options for the major at least two semesters before they plan to complete the internship.

Purpose of the Internship: Integration of Practice and Theoretical Knowledge in the Workplace

The internship, which is based on the concept of “learning by doing,” is an integral part of the

Revised May 2025

curriculum. The expectation is that students will apply concepts, theories, and techniques learned in class to their real-world experiences. The ultimate goal of the internship is to increase students' ability to integrate evidence-informed practice with empirical knowledge, a skill that will be critical for those seeking to enter either the workforce or graduate school.

For some students, this may be their first opportunity to work in a professional environment. Students are expected to learn more about a professional environment/culture. For instance, students may learn the difference between professional and academic writing, become more confident in their oral and written communication skills, practice research skills on real health issues, and learn how to collaborate with coworkers.

Student Eligibility for the Internship

To qualify for enrollment into the internship course (Public Health 470 or 471), students must:

1. Have earned 90 or more credits towards graduation.
2. Have an overall GPA of at least a 2.5 when the student information sheet is submitted.
3. As this is a capstone course where students will showcase the cumulative result of their undergraduate education, students should have completed the majority of their general education requirements and Public Health coursework before enrollment.
4. Demonstrate professional and ethical behavior.
5. Receive permission from the Internship Coordinator.

Internship Process

Identifying an internship site and preceptor requires preparation. Students should begin discussing their internship goals with their academic advisers early in their academic career. They also can make an appointment with the Internship Coordinator to discuss how they can prepare for an optimal internship experience. The student application is due per the deadlines (see Table 1) in the semester *before* a student seeks to complete the internship (PBHL 470 or 471). Seniors and rising seniors must be particularly attentive to following the process and meeting these deadlines in order to complete the internship in the desired semester. Failure to follow these processes and/or not meeting these deadlines can result in a delay in the completion of the internship to a later semester.

Students who have any concerns or questions about an internship site, internship responsibilities, or the preceptor are encouraged to contact the Internship Coordinator.

Attend an Orientation Session

Students should attend an Internship Orientation session the semester *before* they plan on registering for PBHL 470 or 471. The dates/times of the orientation sessions will be posted online and emailed to all majors. During this session, students receive critical information regarding internship expectations and enrollment processes. This includes instructions on the

documents needed to request an internship (student information sheet, student detail sheet, approved resume), the document package timeline, requirements for internship sites and preceptors, the course structure and requirements, and how to establish goals, objectives, and a capstone project for the internship.

Application and One-on-One Meeting with Internship Coordinator

Students must submit a complete internship application consisting of the 1. application form, 2. a resume (if applicable), and 3. student cover letter (if applicable) **by the deadline** listed on Table 1. As noted above, those who do not submit a completed application by the deadline risk not being able to complete the internship during the desired semester.

Students may meet with the Internship Coordinator individually. This meeting is to discuss the student's internship ideas and internship sites. Students who have not identified an internship site should be prepared to discuss their interests and learning goals, as well as any questions regarding the internship. Students may be referred to the Career Center for resume and cover letter reviews, participation in mock interviews, and other advice to improve their interview skills.

Internal applications will be forwarded to internship preceptors after the submission deadline. Preceptors typically contact students directly to schedule an interview. Availability of internal internships varies each semester and admission is not guaranteed.

Students Contact Potential External Sites

Students are responsible for applying directly to external internships. Students can find internship postings on the Public Health Internship Document (myUMBC login required), Handshake, or other job boards. It is the student's responsibility to verify that an internship meets the requirements of PBHL 470 or PBHL 471.

Completion of the Internship Agreement Form

If an interview is successful and there is a good fit between the site and the student's skills and goals, the prospective preceptor works with the student to complete the Internship Agreement form through Docusign. Sites and capstone projects must meet the Public Health internship expectations. The Internship Coordinator will review the Internship Agreement to determine whether the internship and capstone project meets expectations. Students may be asked to work with the preceptor to revise the Internship Agreement. Students and internship preceptors should meet to discuss the learning objectives of the internship. Preceptors will select one or two each of Public Health Program competencies, domains, and experiences that relate to the proposed internship.

Public Health Program Competencies are:

1. Public Health Communication: Communicate public health information, in both oral and written forms and through a variety of media, to diverse audiences. (CEPH 1) (FC 1)
2. Public Health Information Literacy: Locate, use, evaluate, and synthesize public health information (CEPH 2) (FC 5)

3. Scientific Reasoning in Public Health: Understand and use scientific methods of inquiry, models, and theories to investigate public health problems. (FC 2)
4. Critical Analysis in Public Health: Identify, formulate, articulate, and evaluate questions in public health using evidence, data, and various points of view. (FC 3)
5. Public Health Technological: Use a variety of technology assisted means to understand, create, and present public health information following discipline specific needs and best practices. (FC 4)

Public Health Program Domains are:

1. the concepts and applications of basic statistics
2. the foundations of biological and life sciences and the concepts of health and disease
3. the history and philosophy of public health as well as its core values, concepts, and functions across the globe and in society
4. the basic concepts, methods, and tools of public health data collection, use, and analysis and why evidence-based approaches are an essential part of public health practice
5. the concepts of population health, and the basic processes, approaches, and interventions that identify and address the major health-related needs and concerns of populations
6. the underlying science of human health and disease including opportunities for promoting and protecting health across the life course
7. the socioeconomic, behavioral, biological, environmental, and other factors that impact human health and contribute to health disparities
8. the fundamental concepts and features of project implementation, including planning, assessment, and evaluation
9. the fundamental characteristics and organizational structures of the US health system as well as the differences in systems in other countries
10. basic concepts of legal, ethical, economic, and regulatory dimensions of health care and public health policy and the roles, influences, and responsibilities of the different agencies and branches of government
11. basic concepts of public health-specific communication, including technical and professional writing and the use of mass media and electronic technology

Public Health Program Cross-cutting experiences are:

1. advocacy for protection and promotion of the public's health at all levels of society
2. community dynamics
3. critical thinking and creativity
4. cultural contexts in which public health professionals work
5. ethical decision making as related to self and society
6. independent work and a personal work ethic
7. networking
8. organizational dynamics
9. professionalism
10. research methods
11. systems thinking
12. teamwork and leadership

The internship agreement form allows preceptors and interns to formalized the competencies,
Revised May 2025

domains, and experiences included in the internship as well as specific duties and project the intern will complete during the internship.

Table #1: Tasks and timelines for the internship

| Task | Spring Internship | Summer Internship | Fall Internship |
|---|----------------------------------|-------------------------------|-------------------------------|
| Internship Orientation sessions | Late September/ Early October | Late February/ Early March | Late February/ Early March |
| Students Work on Document Package | October | Early March | April |
| Student Document Package Due | October 15 | March 30 | April 15 |
| Review of Materials | Late Oct | Early April | Late April |
| Students Meet with Internship Coordinator | Late October/ Early November | Early-Mid April | Late April/ Early May |
| Final sign off by Internship Coordinator | December | May | Summer |

Internship Site Criteria

Internship sites have a variety of primary missions that may include the delivery of services, service coordination, implementation of regulatory processes, research and analysis, or other health- and healthcare-related objectives. Health departments (federal, state, and/or local), hospitals, community service agencies/non-profits, consulting groups, and professional associations are examples of agencies and organizations often used for Public Health internships.

Internship sites are continually evaluated to ensure that they are providing the full scope of professional experience for students. To be approved for an internship, a site must:

1. Be focused on impacting the health of the community and be committed to the community being served in terms of values, ethics, and practice.
2. Be in good standing in the community and the profession.
3. Provide the intern with the variety, quality, and quantity of learning experiences commensurate with the Public Health program's requirements for

internships.

4. Be non-clinical in nature (although support positions in a clinical setting may be appropriate).
5. Agree to provide an appropriate place for the student to work and provide the necessary supports and resources, including providing a preceptor who will ensure the internship is consistent with the educational objectives.
6. Agree to orient students to the mission and goals of the internship site, providing information about the organization and its day-to-day operations.
7. Agree to provide opportunities for students to demonstrate their competency and complete a final project that can be submitted in fulfillment of the internship requirements.
8. Enter into an agreement regarding the mutual expectations for affiliation prior to a student being placed at the agency, including completion of public health competencies, domains, and experiences included in the proposed internship.

Internship site that require a formal MOU with UMBC should contact the internship coordinator at least one semester (4 months) prior to the start of an internship in order to provide time to complete the required documentation.

Preceptor Criteria

Preceptors are employees of the organization or site who are willing to work closely with and mentor the student over the course of the internship. This includes helping to oversee the student's completion of a capstone project and alerting the Internship Coordinator if problems arise. The preceptor may or may not be the intern's direct supervisor; however, the preceptor must:

- Complete the internship agreement at the start of the internship
- Have worked at the organization for at least six months.
- Provide an orientation to the organization.
- Provide direct supervision to the student.
- Confirm the intern's attendance and submit intern evaluations per the internship course schedule.

Preceptors are invited to and encouraged to attend the Department of Sociology, Anthropology, and Public Health end-of-semester celebration in May and December to view internship presentations. Students interning during summer session have the opportunity to present during December but preceptors should confirm that their summer intern will participate.

Course Registration for PBHL 470, PBHL 471, and PRAC 098

Once the student has secured an approved internship and provided confirmation from the preceptor

the internship coordinator will give the student permission to register for the appropriate section of the internship. Students completing 208 hours will receive permission to register for PBHL 470 and students completing 104 hours will receive permission to register for PBHL 471. Students must resolve all other registration holds (financial, academic, advising, etc) before registering for the internship, including meeting with their regular academic advisor. Students are only permitted to register for the Public Health internship (PBHL 470 or 471) during the academic semester they complete the internship hours. Students may not complete hours one semester and register for PBHL 470 or 471 during a different semester. Students must register for and successfully complete PRAC 098 in conjunction with PBHL 470 or 471 during the semester they complete their internship hours. If a student completes two sections of PBHL 471 during different semesters to meet the six-credit requirement for Experiential Learning they must complete PRAC 098 during each semester.

Operational Policies for the Internship

Summary of Student Responsibilities

- All students registering for the internship must participate in a professional liability insurance plan for which they will be billed separately.
- Students must maintain the confidentiality requirements and other workplace rules of the placement setting (internship site); they must conduct themselves in a professional manner in all of their interactions with agency staff or clients.
- Students must maintain prompt, regular attendance at the internship site according to the schedule established with the supervisor or preceptor. The internship requires 208 hours of participation throughout the semester.
- Students must keep a record of their attendance on time sheets provided by the Internship Coordinator. Timesheets are submitted weekly through Blackboard.
 - Holidays - Students have the right to observe their own religious holidays. When a student's religious holidays conflict with the regular internship site schedule, absence because of religious observance should be cleared in advance with the intern's supervisor. The student will need to have a plan for making up the hours. Students also must plan their work schedule to account for internship site holidays and regular school holidays.
 - Absences - If students find it necessary to be absent from schedule work hours because of illness, they are expected to promptly notify their supervisors and the Internship Coordinator. Students will adhere to the policy on absenteeism included in this Handbook (see below).
- Students must be flexible in scheduling their internship hours to match the hours of operation and/or needs of the internship site.
- If difficulties arise at an internship site, the student should attempt to discuss the

issue with the preceptor. The student should also alert the Internship Coordinator of the situation.

- Students must maintain a journal of their experiences; journal entries are submitted weekly through Blackboard. Further course requirements are discussed in the course syllabus.
- All students are required to participate in the classroom portion of the course as part of their internship experience.
- Students will complete a presentation at the end of the semester to present the project they have participated in at their internship site. This could be a poster presentation, research paper, or other type of project agreed upon by the student, preceptor, and internship coordinator.

The internship experience necessitates close cooperation among the preceptor, Internship Coordinator, and student. Each plays a role in the development of the Internship Agreement, which establishes the parameters of these relationships and the expected student outcomes. Each also plays a role in the ongoing assessment of the internship experience.

Planning Internship Work Hours

The internship requires a total of 208 or 104 hours. In a typical semester this means completing 16 or 8 internship hours per week, starting the first week of the semester or as arranged with the internship site. An intern's schedule may be dependent on the needs of the internship site and the experiences or events that are important for the completion of the internship.

In planning their other courses and responsibilities for the semester of the internship, students should keep in mind that most internship sites operate from 8:00 to 4:30 or from 8:30 to 5:00. Some sites prefer or even require full-day intern availability twice per week, while others prefer specific days and hours to be included in the schedule. However, if regular evening hours are a condition of the internship, such a requirement should be clarified and agreed upon by the student before the internship begins.

As part of the Internship Agreement students must establish the number of weeks that will be worked and the number of hours per week that will result in the 208 or 104 internship hours. Students may not deviate from this plan without permission from both the site preceptor and the Internship Coordinator. For example, additional hours may not be "banked" in order to end the internship early. All students are required to stay at the placement setting until the last scheduled day of the internship.

Internship Absences and Tardiness

Students are expected to be at their internship site as scheduled and to notify both the preceptor and the Internship Coordinator promptly in case of an unexpected absence or tardiness. In the event that the student has an outside conflict (e.g., doctor's appointment or school obligation) the student should notify the preceptor and site supervisor as early as possible of the upcoming absence. Students must work with the preceptor or site supervisor to develop a plan for making

up missed work hours.

As someone with a professional presence, the student is important to the site and the site's ability to meet its goals and objectives. Unscheduled absences can be disruptive to an organization's operations and the ability to meet deadlines or other needs. A pattern of missed time can seriously devalue the student's overall performance, delay completion of expected projects, and can be grounds for dismissal from the internship site. If a student is going to be late or is unable to be at the site as planned (e.g., due to illness), the student must notify the preceptor and site supervisor both via phone and via a follow-up email. Any unscheduled absence ideally will be reported prior to the scheduled work time, but no later than within 20 minutes of the intern's report time. The use of text messaging is NOT appropriate for a professional worksite unless the preceptor or supervisor explicitly indicates this is the preferred form of communication. It also is important that students contact the site personally rather than have a third party make the call.

Speaking directly with someone at the internship site, as opposed to leaving a message or texting, allows the student to inform the preceptor or supervisor of any appointments or critical work that either must be cancelled or covered by another person during the student's absence.

Please note: all missed time must be completed before the end of the semester in which absences occur. Extenuating circumstances that require extended absences must be communicated to the internship coordinator. If a student is not able to complete the 208 or 104 required hours by the end of the semester an additional plan will be created.

Internship Expenses

Students pay their own transportation costs to and from the internship site. If possible, internship sites are asked to pay transportation costs that students may incur in the course of carrying out their duties, such as conference/meeting attendance. Students must follow site's procedures regarding reimbursement.

Health insurance is required of all students enrolled in the internship. Students may obtain their coverage through family or individual plans. Any illness which requires medical attention or hospitalization during the internship placement is the responsibility of the student.

Students are covered through blanket enrollment into the University's liability insurance policy for Allied Health Specialty Fields. At the beginning of the semester, all students enrolled in Public Health 470 or 471 for that semester are billed approximately \$17.00 for the insurance, which is provided through the State of Maryland.

A brief description of the plan is provided below:

1. Individual limits/coverage applies to each insured of: \$1,000,000 per incident/\$3,000,000 annual aggregate.
2. Legal fees and other related defense costs are covered even if a claim is without merit.
3. Master Policy Format: Coverage will apply individually under a master schedule policy on file in the Office of Environmental Health on campus.

Exclusions:

4. Coverage does not apply to:
 - a. professional activities not a recognized part of the academic training or without approval of the school authorities;
 - b. acts in conflict with state, federal, or municipal laws.
5. Reporting of Claims Incidents: The policy requires a written narrative description of the sequence of events including the names, addresses, and telephone numbers of those associated with the alleged act or omission. The original is to be forwarded to the program administrator of the site and one copy is retained by the insured.

Evaluation and Grading of Student Performance

Ongoing evaluation is a key element of the internship process, so both students and preceptors complete evaluations at the midpoint and end of the semesters. As the Internship Agreement outlines the goals and objectives of the internship prior to the start of the semester, the preceptor's evaluation inform the intern of any challenges that may need to be addressed to improve intern's performance and/or to provide positive feedback to the intern. The internship is a learning experience. Regular supervision allows ongoing evaluation of the student's performance, progress, and learning needs.

The preceptor's evaluation is a formal review of the intern's performance to identify areas of strength and/or gaps in performance. It is important that the evaluation is based on the intern's actual performance in the internship setting rather than on the potential for future employment or professional expertise. This process takes time but often results in useful discussions and encourages student self-reflection and performance improvement.

The preceptor will complete the mid-term and final evaluations each semester on the requisite forms so that the Internship Coordinator will have a clear indication of the intern's demonstrated competencies. The student will sign off on the evaluation and the evaluation will be routed to the internship coordinator. It is recommended that preceptors review the evaluations with students so feedback is consistently delivered.

The Public Health program uses a regular grading system for the internship. Preceptors will be asked to evaluate interns for the onsite portion of the course. However, many factors affect the final grade including the completion of required hours, completion of a final project, completion of course learning activities, attendance in the classroom portion of the course, and positive evaluations from the preceptor. Failure to adhere to course requirements will impact the assigned final letter grade.

Policy Regarding the Granting of Incomplete Grades in the Internship

A grade of "Incomplete" in Public Health 470 or 471 may be given in unusual circumstances.

Per University policy, the majority of the course work, in this case internship hours, need to be complete to be eligible for an “Incomplete” grade. The student must meet with the Internship Coordinator to explain the situation that is contributing to the request. If the Internship Coordinator agrees that an incomplete is warranted, the Internship Coordinator will work with the student and the preceptor to develop a written contract detailing the expectations and timeframe for the completion of the missing work. Failure to adhere to the negotiated deadline will result in a failing grade for the course. It is the expectation of the university that all incomplete work will be completed by the end of the following semester.

Employment-Based Internships

The Public Health adheres to the belief that the role of an “employee” must be clearly distinguished from the role of an “intern” in order to safeguard the integrity of the learning experience. The intern and employee roles overlap in some ways yet are fundamentally different. Both interns and employees require orientation and training. Tasks they perform may at times be identical. Both are expected to comply with organizational policies and practices. However, the learning tasks and assignments of interns are structured to enhance their education and competency attainment, not the site’s need for productivity or daily workflow.

Supervision of a student intern is clearly differentiated from the supervision employees in an agency typically receive. It focuses on the identification and application of theory in practice, the development of critical thinking and analytical skills, the evaluation of alternative approaches, and the processing of the students’ feelings towards the agency and the work. Agency supervision often focuses on attending to agency policy and procedures and on the important agency goal of productivity. Students do not carry the employment responsibilities of paid staff, nor should they be expected to do so.

Students wanting to conduct their internship at their place of employment must submit a written request to do so in the form of a letter submitted to the Internship Coordinator. The letter should include details of how the student’s employment meshes with the Internship Guidelines and how tasks performed meet the criteria for the internship. Approval of such a request is not automatic, but is considered with deference to maintaining the integrity of the student’s learning and upholding a collegial relationship between the program and its partner internship sites.

Internships will be approved only for sites that are able to demonstrate their capacity to permit the student to work on alternative tasks – not only those of their “regular job” – so that they may achieve the learning objectives developed for their particular experience. The student must demonstrate that employment responsibilities and assignments are separate and distinct from their internship assignment. This can be accomplished through reassignment to another department or division on the student’s designated internship days (approximately 16 hours per week) which may or may not be in the same physical location. It may also be accomplished by giving the intern a project that is not a regular part of their employment duties.

Procedures for Resolution of Internship Issues

Every attempt is made to quickly and effectively address any identified concerns or problems related to the internship experience. In an effort to assist students in successfully completing their experience, Public Health has clearly defined academic and professional standards (see Internship Guidelines). Problem-solving roles for all people involved in the internship experience and a procedure for working through problems are provided in this section to assist all parties if concerns may arise.

Students who are interested in an internship at a site that does not meet approval by the Internship Coordinator may appeal to the Public Health faculty in order to override the Coordinator's decision. To appeal, the student should send a letter to the Program Director with information about the site, the learning goals and objectives provided, a proposed final project, and a discussion of how and why the proposed internship meets the criteria for the internship. The appeal will be discussed by the full Public Health faculty at the first Public Health Committee meeting following receipt of the appeal letter and a decision will be rendered at that meeting.

Although the Public Health program recognizes that an internship site can terminate an internship at any time, the Program tries to engage all parties in problem-solving before a student is removed. Preceptors and/or their agency will not be held liable if a student is asked to leave the agency for any reason. Problem-solving steps are modeled after the intervention techniques used in conflict resolution. In the steps outlined below, areas in need of improvement are identified and then meetings occur to address the identified issue(s): Discussion of the issues or concerns takes place between the student and the preceptor. Expectations are clarified and the student and preceptor create a written plan to address issues. The preceptor will document what occurs in this meeting and will save this documentation for future reference. If improvement does not occur within the agreed-upon time frame, the Internship Coordinator is contacted. The Internship Coordinator:

- Will inform the Program Director.
- Will meet with the student and preceptor in person (or, if needed, by phone) to discuss issues and will create a written Internship Student Improvement Plan (see Appendix A) which outlines expectations and provides benchmarks, a timeline, and consequences if expectations are not met.
- The Internship Coordinator, preceptor, and student will sign the Improvement Plan. The Internship Coordinator will keep the Plan in the student's file and will share a copy with the Program Director.

The Internship Coordinator, preceptor, and student will again meet to review the student's progress toward identified goals. This second meeting will be scheduled for a mutually agreeable timeframe. If the student has not made sufficient progress, the consequences written in the Internship Student Improvement Plan will be carried out. If a decision to discontinue the internship is recommended, the student will not automatically be allowed to pursue another internship. There may be a time when a student is asked to leave their internship without notice. In this situation,

Revised May 2025

the student may be placed on a Student Improvement Plan in an effort to become more successful in the next placement.

Discontinuation from the Internship

- If discontinuation in the internship is the outcome of the meeting with the Internship Coordinator, preceptor, and the student, then the Internship Coordinator, Program Director and other parties as appropriate (i.e., Associate Chair, Chair), will meet with the student to discuss the situation and create a plan toward graduation. The student may be offered an opportunity to repeat Public Health 470 or 471 after demonstrating that he/she has addressed the concerns leading to the original termination or failure. Under no circumstances is an undergraduate student allowed to retake any portion of the internship more than once.
- If the conclusion reached is that the student is unable to meet academic and/or professional standards in the field, the appropriate faculty member(s) will advise the student that he or she may need to consider another major. Please note that this would only occur as a result of extreme circumstances or events.

Procedures for Reviewing and Appealing Grades

The University of Maryland Baltimore County has established procedures for reviewing and appealing grades. The grade appeal policy applies to Public Health 470 and 471. Students should first attempt to resolve such grievances informally, normally by consulting first with the faculty member who assigned the grade (Internship Coordinator), then with the Program Director, then the Chair, the Dean, and finally with the Provost's Office. Students should refer to UMBC's student handbook for information on grade appeals.

Diversity and Inclusion

Each person has a rich personal, social, and intellectual history, one that continues to develop with new experiences. This diversity is part of what we study in the social sciences. It is also what makes a classroom experience and a university education at a place like UMBC so engaging.

The Department of Sociology, Anthropology, and Public Health is committed to creating an inclusive environment for students of all backgrounds to learn and to thrive. We expect our students to be part of this work. We encourage anyone who has concerns or suggestions to talk with their faculty and advisers.

Students with Disabilities

From the UMBC 2017-2018 Career Guide:

If you are a student with a disability, you might have specific questions or concerns about

approaching the job search process, navigating interviews, and determining if, when, or how to disclose your disability. The Career Center and The Office of Student Disability Services and Accessibility Resources are essential resources for helping you to understand your rights and responsibilities and how they apply to the world of work.

It is important to remember that you are not required to disclose your disability to an employer. What you should know is that if you require accommodations to perform the essential functions of the job, then you need to disclose disability-based limitations in order to gain access to those accommodations. Disclosure is personal and challenging; luckily, there are resources to help you.

WHAT YOU SHOULD KNOW ABOUT ADA

Under the Americans with Disabilities Act (ADA), you must be qualified to perform the essential functions or duties of the job, with or without a reasonable accommodation. You need to know that:

- You are entitled to reasonable accommodations for your disability (but must ask for them and follow their process). Be prepared to suggest possible options that will allow you to do the job safely and productively.
- You may request accommodations regardless of whether the opportunity is an internship (paid or unpaid), full-time, or part-time.
- An employer is required to keep your disability confidential from other employees.

For additional assistance, please contact the Career Center and/or the Office of Student Disability Services and Accessibility Resources.
